### **SUMMARY OF THE PRIOR ART OF RECORD**

Burd et al. (US 6,961,750 B1) – Burd discloses a server-side control object processes and generates a client-side user interface element for display on a web page. Multiple server-side control objects may be combined into a hierarchy of server-side control objects that cooperate to generate the resulting authoring language code, such as HTML, for display of a web page on a client. The operation of processing the client-side user interface element may include at least one of an event handling operation, a postback data handling operation, a data binding operation, and a state management operation. The state management operation relates to the state of a server-side control object.

Popp et al. (US 6,651,108 B2) – Popp discloses in the present invention, HTML elements are mapped to objects in an object-oriented environment. Classes of objects are defined for each HTML element as well as the HTML document (or page). By providing a one-to-one mapping between each HTML element and object classes, HTML documents can be manipulated programmatically. The properties of each element are stored in instance variables of the associated object. Each object class can include methods to manipulate the HTML element within an HTML document.

Witwer et al. (US 2004/0098360 A1) – Witwer discloses a user-created life portal for viewing and accessing content on the Internet is described. The platform, referred to as

Art Unit: 2172

a life portal, is configured by the user to display only content that is of interest to the user, thereby reflecting the personality and life of the user. The content displayed in a life portal is scraped from web sites and is not limited to sites licensed or maintained by the life portal service provider. The content is displayed as a view or a magazine. Views and magazines (content) are stored in life pages. A view is content that is contained in a portlet and is retrieved from a single web site. A magazine is a collection of content, such as article headlines and links, on a particular topic from one or more web sites. All content in a life portal is specifically tailored to meet the targeted interests and preferences of the user and is designed to exclude content not of direct interest to the user.

### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

Independent claims 34 and 50 are allowable over the prior art of record, specifically, the prior art of record fails to disclose:

Claim 34

using a control state reader chain to read the state information in the request, wherein the control state reader chain contains one or more control state readers, wherein each control state reader operates to read the state information for at least one said object,

Art Unit: 2172

and wherein the container can find a corresponding control state reader for a particular control;

Claim 50

use a control state reader chain to read the state information in the request. wherein the control state reader chain contains one or more control state readers, wherein each control state reader operates to read the state information for at least one said object, and wherein the container can find a corresponding control state reader for a particular control;

The respective dependent claims add further limitations to the allowable subject matter of the independent claims and are, therefore, allowable over the prior art of record. Specifically, the prior art fails to clearly teach or fairly suggest the combination of elements as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2172
